250-word Statement of Purpose describing what you propose to achieve by doing this programme and for what ultimate goal:
It is an exciting time. It is a scary time. The technology is getting smarter, it's size is getting smaller. From using a beetel wired telephone to a 5g Android 11 , 888 Qualcomm processor smartphone. It took sheer will and toil of around 28 years to provide human such a seamless tech experience. My determination to pursue the course of Masters in Engineering in Microelectronics has grown through years , as a kid it would be pure curiosity and imbibing information, which later turned into learning basics and application through my under graduation course. BITS provides a very precise and accurate curriculum of ME in microelectronics which is similar to many prestigious national institutes but none at par. My choice here is particular also due to the opportunity provided in the fourth semester Practice School. I have also understood the real world application use of Microelectronics and Embedded circuits in my project, a Wireless LED notice board, operated via a GSM module. I will be able to put good use of my work experience of almost 2 years in programming in C language. With a faculty council including deemed teachers like IEEE graded Senior Member Prof Rahul Banarjee and Prof M.S Dasgupta who is renowned for his Best paper award on Smart Control of Electric Lamp using AI based smart Controller, I am highly motivated, inspired and determined to learn in depth and explore new advancements of

electronics engineering as well. What B.tech taught me as an engineering field, ME will shape it in the best and correct way to provide a substantial contribution to the world of Electronics.
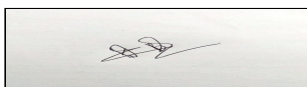

Declaration by father or guardian (or employer where applicable):
